THE DATA DILEMMA

Imagine a company navigating the digital landscape, overwhelmed with scattered, unstructured data. Despite having access to information, they struggle to extract insights that drive confident decisions. But beyond that, think about businesses and individuals who don't even know such data exists opportunities, risks, and insights remain invisible to them.

In a complex and unpredictable world, starting and running a business is already challenging. The absence of critical information makes it even harder.

Enter Innovatoor, Delivering Intelligence You Didn't Know You Needed

At Innovatoor, we envisioned a world where businesses don't drown in data and also don't miss out on data they never knew existed. That's why we built a full-stack Data Intelligence ecosystem — a platform designed not just to collect data, but to uncover hidden insights, deliver structured intelligence, and empower risk-free decision-making.

We specialize in:

- Custom scraping bots designed for specific data missions.
- Use of multiple OSINT tools like Maltego and others.
- Sockpuppets for discreet and undetectable research.
- Proprietary OSINT tools like our OSINT Wikipedia Toolset (Premium).
- And at the heart — a centralized Data Warehouse Platform.

We don't just collect data; we deliver intelligence that organizations don't have, and often don't even know exists.

THE PROBLEM WE SOLVE — THE COST OF IGNORANCE (WITH REAL NUMBERS)

Businesses and organizations face a silent crisis of data gaps and misinformation:

The cost of not doing due diligence, market research, or competitor analysis is measured in missed opportunities, financial losses, and reputational damage.

INNOVATOOR

Our Technology Solutions

Innovatoor solves this by:

- Delivering data-driven insights for confident decision-making.
- Automating due diligence, competitor tracking, and market research.
- Providing access to data that businesses don't have, and competitors may already be using.

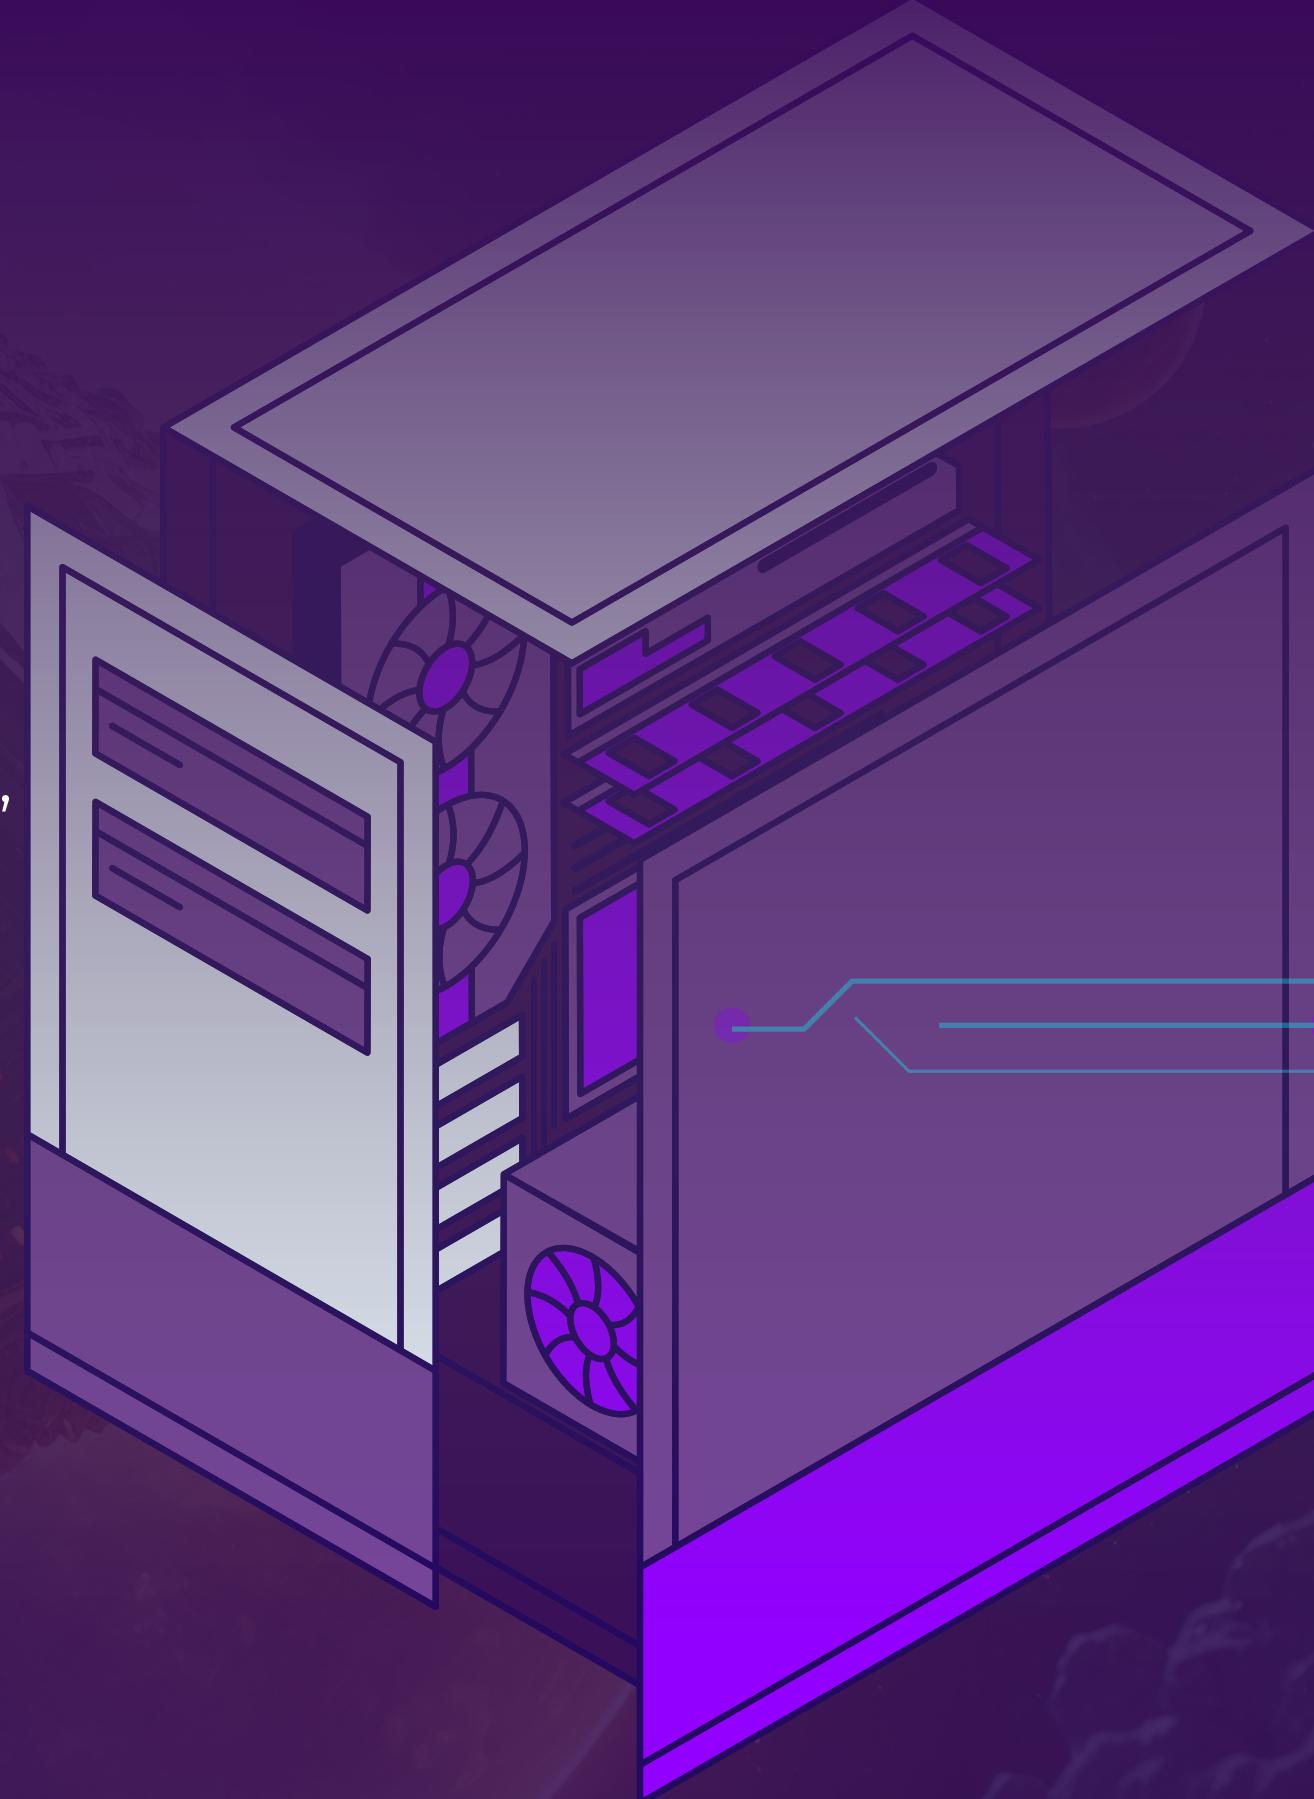

INNOVATOOR'S SECRET SAUCE: FULL DATA OWNERSHIP & DISCOVERY

What makes Innovatoor unique isn't just technology; it's how we redefine data discovery:

- End-to-End Data Ownership: From collection to structuring — no third-party dependence.
- Specialized Multi-Bot Architecture: Each bot focuses on specific data — tenders, influencers, scam reports, business contacts.
- Sockpuppet-Driven Research: For discreet exploration of digital landscapes inaccessible by traditional scraping.
- Proprietary OSINT Toolset: Powered by 200+ tools, including our OSINT Wikipedia ecosystem.

We help you discover what you didn't know you were missing.

The Innovatoor Data Warehouse Intelligence in Action

Our Data Warehouse isn't just storage — it's an intelligence engine that structures and contextualizes data for strategic use:

- Company Profiles (Stock Exchange, SOEs, Private Firms)
- Influencer & Brand Analytics
- Tenders, Rentals, Market Listings
- Scam Reports & Verification Logs
- News Articles filtered by topic, sentiment, and source credibility
- Custom datasets tailored for specific business goals

This structured intelligence fuels strategies for businesses who need clarity in uncertain markets.

CUSTOM INTELLIGENCE PROJECTS

Designed to address unique data needs

DATA-AS-A-SERVICE (DAAS)

Clean, structured datasets delivered in usable formats (Excel, JSON, CSV) and Strategic Consulting Services: Turning data into business strategies.

OUR CLIENTS: VIDA, EX NIHILO, GOVARWA, MAHANAIM LIFE CENTER, ERIC ADAMS, THE CEDAR, CBS RWANDA, WILLY, ETC

Meet the Founder Mugenzi Bel Arthur

Mugenzi Bel Arthur is a Rwandan entrepreneur and digital intelligence specialist, best known as the Founder of Innovatoor, a Kigali-based Data tech company that leverages OSINT, data scraping, and digital consulting to empower organizations with actionable insights.

Self taught programmer, Arthur began working in OSINT in 2018, pioneering the use of automated scraping bots and intelligence tools to conduct market research, due diligence, risk analysis, and competitor evaluation, particularly across African markets.

His expertise powers Innovatoor's proprietary Data Warehouse platform, which structures datasets across sectors like demographics, companies, influencers, religion, politics, and more. Arthur's work bridges technical complexity with real-world application, making digital intelligence accessible to non-technical users, including SMEs, NGOs, and regulatory agencies.

His daily toolkit includes technologies like Selenium, BeautifulSoup, Apify, Maltego, and Google Dorks, redefining how organizations utilize OSINT and web data for smarter, safer decision-making.
